Is your waste ...

HAZARDOUS

CORROSIVE

MUTAGENIC

EXPLOSIVE

REACTIVE

TOXIC

Do you use chemicals, products with hazard symbol or safety data sheets?

Then read on:

This leaflet is about controls on Hazardous Waste, those wastes which cause greatest environmental damage or are dangerous to human life. The controls:

- require you to notify the Regulator in advance of moving hazardous waste (**pre-notification**) by completing a form (**consignment note**);
- set out Fees for consignment notes;
- restrict the mixing of wastes.

You need to know about the Regulations if you have to:

- Dispose of;
- Carry; or
- Receive.

Hazardous Wastes.

This includes Hazardous Wastes going to:

- Storage;
- Treatment; or
- Recycling or Disposal

Definitions

What is waste?

Waste can be anything you own, or your business produces and which you want to get rid of. The publications listed on page 11 will help you decide whether something is waste.

What are Hazardous wastes?

These are dangerous wastes which display hazardous or toxic properties. They are listed in the List of Wastes Regulations (Northern Ireland) 2005. Some common hazardous wastes are listed on page 10.

These Regulations do not apply to Hazardous Waste from a domestic property, except where it is removed by another person for profit.

Procedures

in accordance with the Hazardous Waste Regulations (Northern Ireland) 2005

What happens if my waste is hazardous?

You must tell the Regulator before your hazardous waste is removed. This is called **pre-notification**. You do this by filling in a form called a **consignment note** which you may obtain from the Regulator. The Regulator must receive the form **at least** three clear working days before you want the waste moved.

Who is the Regulator?

The Regulator is the Environment and Heritage Service, an Agency within the Department of the Environment.

Why Pre-notify?

The Regulator has to see that the waste is properly described and going to a suitable site. The paperwork also helps to track the waste to prevent illegal dumping. All of this helps to ensure that hazardous waste is handled properly - protecting the environment and preventing harm to human health.

How do consignment notes work?

If you want to get rid of waste?

You are the **consignor**

Before any hazardous waste leaves your site, you (or the person moving the waste - the carrier) must fill in parts A and B of a six copy consignment note. You (or the carrier) must send one copy to the Regulator. This must be done at least three clear working days, but not more than one month, before the waste is to be moved. You will be left with five copies. When the waste is about to be moved, the carrier must agree with you the information at parts A and B. The carrier will complete part C of the form. You must then sign part D. You must keep a copy and send one to the producer (if you are not the producer of the waste).

If I am moving the waste?

You are the **carrier**

Before any Hazardous Waste moves from the site, there must be five copies of the consignment note. You should

check the information at parts A and B on each copy. You must complete part C of the form. If the details are not correct, you and the consignor should both agree any changes. These changes should only be minor - it would be sensible to prepare a new consignment note if there are major changes to the details. Once the consignor has signed and kept a copy (and a copy has been given to the producer, if different) you will be left with three copies of the form. Make sure they travel with the waste to the consignee. When you have delivered the waste, you must make sure that the person accepting it signs the form. You must keep a copy.

If I am receiving the waste?

You are the **consignee**

You must sign all three copies to say that you have accepted the load and that you are authorised to manage it properly. Return one copy to the carrier, keep one for yourself and send one copy to the Regulator. You are now required to send a return to the producer. This may be a copy of the consignment note or a return containing the details specified in Schedule 8 of the Regulations.

Do I have to pre-notify each time?

Not necessarily. You can pre-notify a whole series of movements if they are repetitive - the same type of waste moving between the same places. However, each movement in the series will need a fresh set of consignment notes. Each new set must describe the waste in the batch properly, including the amount being moved. If your waste is removed on a carrier collection round, the carrier may complete all the paperwork.

Does everyone have to pre-notify?

Almost everyone, but there are some exceptions. For example, pre-notification is not needed for waste taken off ships; nor for materials being returned to manufacturers where they do not meet the specification. Consignments of lead-acid batteries will not require pre-notification.

Why are fees charged?

Fees enable the Regulator to meet the costs of supervising hazardous waste movements. A fee must be paid in relation to most consignments.

The level of fees will be reviewed periodically.

Other Matters

What records must I keep?

Consignors, carriers and producers **must** keep a register of the consignment notes copies for 3 years, but consignees will need to keep copies of the consignment notes until they surrender the licence for the site they manage.

Where can I get the consignment notes?

From the Regulator (see below)¹. Users and commercial suppliers are free to produce their own consignment notes. However general layout and wording will need to be followed, and they must still pay the relevant fee.

Are there fines for breaking the rules?

Yes - if a court convicts you of not complying with the Regulations you could suffer a fine of up to £5,000 and/or 2 years in prison.

The Regulator can also issue fixed penalty fines of £200 for certain offences.
